PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building scalable web applications and SaaS platforms using Python, Django (DRF), and React. Delivered production features including voucher systems, payment integrations (Stripe, Rapyd, Teya & Opyao), role-based access control, onboarding flow, subscription billing, and inventory management. Strong foundation in data structures, algorithms, and object-oriented design. Seeking a challenging Software Engineering role to contribute to innovative products and continue growing in a dynamic engineering environment.

TECHNICAL SKILLS

Languages: Python, C, C++

Frameworks: Django, Django REST Framework (DRF), React

Databases: PostgreSQL, MySQL

Tools & DevOps: Docker, Celery, Redis, Cloudflare, cPanel, Dokploy

Payments & Integrations: Stripe, Rapyd, Teya, Opyao, Cloudflare Turnstile

Core Concepts: Data Structures & Algorithms, OOP

PROFESSIONAL EXPERIENCE

Backend Developer (Remote) | DevsStream Ltd. | Oct 2025 – Present

- Developed and shipped backend features for Kaaruj (e-commerce/SaaS platform): voucher system, sales reporting, role management, offer engine, invoicing, corporate accounts, blog module, and gift-card functionality.
- Built core backend modules for Nanis: voucher system, invoicing, offers, reviews, payment gateway(Rapyd & Teya), Email Notifications, Cloudflare Turnstile integration, and comprehensive server-side validation.
- Architected and implemented secure authentication, Google Signup & Login, role-based access control, custom domain support, Vat systems, onboarding flow, multi-provider payment systems (Stripe, Rapyd & Opyao), and subscription billing for an in-house **SaaS Restaurant** Management platform.
- Contributed to the design and development of an in-house **Inventory** Management system. Implemented dashboard api, export & import api, role-based access control, Order management, Monthly reports, filtering, pagination etc.

Full Stack Developer (Part-Time) | Janata-Wifi | Mar 2025 – Oct 2025

- Developed both frontend and backend components for an in-house SaaS platform.
- Implemented secure authentication flows and role-based access management.

PROJECTS

InvoiceFlow — Full-Stack Invoice Management System | Frontend • Backend • Live Demo

- End-to-end invoice management application with Django backend and React frontend.
- Implemented JWT authentication, Google OAuth signup, Automated Email notification.
- Integrated Stripe and developed subscription billing systems.

BlogTopia — Full-Stack Blogging Platform | Frontend • Backend • Live Demo

- Full-featured blogging platform built with modern web technologies.
- Implemented JWT authentication, review and rating system, add to favourite, search, filtering etc.
